

Tagging

Mailbox users can tag their mail address like in `me+facebook@example.org`. They can control the tag handling in the users **openemail UI** panel.

Used:

0%

0 / 33 MiB, 0 messages

Set handling for tagged mail:

In subfolder

In subfolder: a new subfolder named after the tag will be created below INBOX ("INBOX/Facebook").
In subject: the tags name will be prepended to the mails subject, example: "[Facebook] Meine Neuigkeiten".
Example for a tagged email address: ich+Facebook@example.org

Reset ActiveSync device cache:

Reset now

In many cases a device cache reset will help to recover a broken ActiveSync profile.
Attention: All elements will be redownloaded!

Available Actions

1. Move this message to a sub folder "facebook" (will be created lower case if not existing)
2. Prepend the tag to the subject: "[facebook] Subject"
