

Temporary Email Aliases

These temporary email aliases are mostly used for places where we need to provide an email address but don't want future correspondence with. They are also called spam alias.

To create, delete or extend a temporary email aliases you need to login to mailcow's UI as a mailbox user and navigate to the tab **Temporary email aliases**:

Set handling for tagged mail:

In subfolder

In subfolder: a new subfolder named after the tag will be created below INBOX ("INBOX/Facebook").

In subject: the tags name will be prepended to the mails subject, example: "[Facebook] Meine Neuigkeiten".

Example for a tagged email address: ich+**Facebook**@example.org

Reset ActiveSync device cache:

Reset now

In many cases a device cache reset will help to recover a broken ActiveSync profile.

Attention: All elements will be redownloaded!
