Adjust Service Configurations

The most important configuration files are mounted from the host into the related containers:

```
data/conf
unbound
   └─ unbound.conf
  - dovecot
    ─ dovecot.conf
    ├─ dovecot-master.passwd
    ├─ sieve_after
   └─ sql
       ├─ dovecot-dict-sql.conf
       └─ dovecot-mysql.conf
  - mysql
   └─ my.cnf
  - nginx
   ├─ dynmaps.conf
   ├─ site.conf
   └─ templates
       ├─ listen_plain.template
         listen_ssl.template
       server_name.template
  - postfix
    ├─ main.cf
     master.cf
     postscreen_access.cidr
     - smtp_dsn_filter
   └─ sql
       mysql_relay_recipient_maps.cf
       mysql_tls_enforce_in_policy.cf
       mysql_tls_enforce_out_policy.cf
       mysql_virtual_alias_domain_catchall_maps.cf
       mysql_virtual_alias_domain_maps.cf
        mysql_virtual_alias_maps.cf
       ├─ mysql_virtual_domains_maps.cf
        ├─ mysql_virtual_mailbox_maps.cf
        mysql_virtual_relay_domain_maps.cf
       mysql_virtual_sender_acl.cf
       mysql_virtual_spamalias_maps.cf
   rspamd
     — dynmaps
       ├─ authoritative.php
       ├─ settings.php
         tags.php
       vars.inc.php -> ../../web/inc/vars.inc.php
      - local.d
       ├─ dkim.conf
          - metrics.conf
         options.inc
```

Adjust Service Configurations

Just change the according configuration file on the host and restart the related service:

```
docker-compose restart service-openemail
```
