Logs

> ⚠️ **Warning**
>
> This section only applies for Dockers default logging driver (JSON).

To view the logs of all openemail: dockerized related containers, you can use `docker-compose logs` inside your openemail-dockerized folder that contains your `openemail.conf` . This is usually a bit much, but you could trim the output with `--tail=100` to the last 100 lines per container, or add a `-f` to follow the live output of all your services.

To view the logs of a specific service you can use `docker-compose logs [options] $service_name`

> ℹ️ **Info**
>
> The available options for the command **docker-compose logs** are:
>
> - **--no-color**: Produce monochrome output.
> - **-f**: Follow the log output.
> - **-t**: Show timestamps.
> - **--tail="all"**: Number of lines to show from the end of the logs for each container.
