# Deinstall

To remove openemail: dockerized with all it's volumes, images and containers do:

```
docker-compose down -v --rmi all --remove-orphans
```

> **ℹ Info**
>
> - **-v** Remove named volumes declared in the `volumes` section of the Compose file and anonymous volumes attached to containers.
> - **--rmi** Remove images. Type must be one of: `all` : Remove all images used by any service. `local` : Remove only images that don't have a custom tag set by the `image` field.
> - **--remove-orphans** Remove containers for services not defined in the compose file.
> - By default `docker-compose down` only removes currently active containers and networks defined in the `docker-compose.yml` .
