Redis

Redis is used as a key-value store for rspamd's and (some of) openemail's settings and data. If you are unfamiliar with redis please read the introduction to redis and maybe visit this wonderfull guide on how to use it.

Client

To connect to the redis cli execute:

```
docker-compose exec redis-openemail redis-cli
```

Debugging

Here are some usefull commands for the redis-cli for debugging:

MONITOR

Listens for all requests received by the server in real time:

```
# docker-compose exec redis-openemail redis-cli
127.0.0.1:6379> monitor
OK
1494077286.401963 [0 172.22.1.253:41228] "SMEMBERS" "BAYES_SPAM_keys"
1494077288.292970 [0 172.22.1.253:41229] "SMEMBERS" "BAYES_SPAM_keys"
[...]
```

KEYS

Get all keys matching your pattern:

```
KEYS *
```

PING

Test a connection:

```
127.0.0.1:6379> PING
PONG
```

If you want to know more, here is a cheat sheet.
